

## Table of Contents

### Preface

#### 1. Black and White Swans, Evolution, and Markets

Long-term risk, listening skills, and evolution  
Digging Trenches and Studying Dirt: The Principle of Superposition.  
Costs of Disasters and the Role of Markets

#### 2. What is a Natural Disaster? Where Do They Occur, and Why? Are They Different from Human-Made Disasters?

The Triangle Shirtwaist Factory Fire.  
Earth's Natural Cycles: Volcanoes, Climate, and Earthquakes.  
Stick-slip and elastic rebound.  
Stick-Slip and Elastic Rebound on a Vertical Fault.  
Stick-Slip and Elastic Rebound on a Subduction Zone Fault.  
Volcanoes and Climate.  
The Cretaceous and Permian Extinctions.  
Hurricanes, Flooding and Sea Level Rise

#### 3. If We Know So Much about Natural Disasters, Why Are We So Vulnerable?

Scientific Uncertainty  
L'Aquila  
Time Lag, Sticky Infrastructure, and the Challenge of Relocation.  
The Importance of Building Codes  
Drift, Aliasing and Clipping.  
The Importance of Acceleration  
Cost versus Benefit

#### 4. Japanese Earthquakes and Nuclear Power Plant Failures

Hydrogen: why is it produced in nuclear power plant accidents? Why is it dangerous? What's it got to do with the Hindenburg?  
How Bad Was Fukushima?  
When?  
What?  
Where?  
Measuring Fukushima's Radiation-the Role of Cesium  
Cesium and Wine  
Comparisons to Chernobyl  
What Went Wrong?  
A Disturbing Precursor  
Regulation and Transparency

## **5. Future Earthquake Disasters in Seattle and Istanbul**

- Sleepless in Seattle
  - Settlement history
  - Scientific history
  - Seismic reflection
  - Turbidites and Bouma Sequences
- Tsunamis in Switzerland
- The Orient Express

## **6. Nuclear Power, Coal, and Tuna: the Concept of Relative Risk**

- The Toxic Legacy of Lead
- Mercury and Coal
- Deaths from Coal versus Deaths from Nuclear Power
- Carbon Capture and Storage
- What about solar?

## **7. Past and Future Coastal Flooding: Galveston, New Orleans, Bangladesh, and the Specter of Sea Level Rise.**

- The Great Galveston Hurricane of 1900
- New Orleans and Hurricane Katrina.
- River Deltas, Subsidence, and Levees.
- Could it happen again?
- Sea Level Rise: A Slow Disaster in the Making
- Slow sea level rise and rapid flooding
- What other regions are at risk?
- Summary

## **8. What's All the Fuss about Global Warming?**

- Communication: the need for long term data, and the challenge of explaining them
  - Scientists as poor communicators
  - Communicating Uncertainty.
  - The Public and Politicians as Poor Listeners: the Role of Media
  - The Sea Ice Story
  - Media Obfuscation
- The Time Lag Problem: Why We Need to Think Long Term
- Economic Consequences
- Some Lessons from Greenland

## **9. Solutions**

- Communication
  - Improving Scientific Communication.
  - Improving the Listening Skills of Politicians and Policy Makers.
  - The Role of Media.
  - Whistle-Blower Protection for Scientists
- Transparency

Building Safety  
Media Reporting and Political Statements  
Environmental Audits.  
Let Markets Work Their Magic  
The Sea Level Rise Example  
Tax Mercury and Gold  
Limits to Limited Liability?  
The Magic of New Technology: Blue LEDs, the Tesla, and Photosynthesis  
Blue LEDs.  
The Tesla.  
Make Fuel Like a Plant.  
Don't Give Up on Nuclear.  
R&D & Taxes.  
Avoiding the "Coal Trap".  
Independent Boards  
Lessons Learned  
The challenge of large infrastructure projects.  
Summary  
List of Recommendations, by Chapter

## **Acknowledgements**

## **References and Further Reading**

## **Online Appendix: Exercises for Students**

Background and questions from Chapter 2

What is a fault?

Stick-Slip, Strain Accumulation, Elastic Rebound and Earthquakes.

Question 2-1 (Earthquake slip rates – long term)

Question 2-2 (Earthquake slip rates – short term)

Earthquake Size, Rupture Area and Fault Type

Question 2-3 (Earthquake energy and rupture area)

Background and questions from Chapter 3

Earthquake Recurrence Intervals and Aliasing

Question 3-1 (Earthquake recurrence and sampling)

Question 3-2 (Earthquake recurrence and clustering)

Background and questions from Chapter 4

Question 4-1 (Radioactive decay and nuclear fission)

Question 4-2 (Instrument design)

Question from Chapter 5 (Earthquake recurrence)

Background and questions from Chapter 6

- Question 6-1 (Lead in Cities)  
Boom and Bust cycles, the price of oil, and population growth – the magic of differential equations.
- Question 6-2 (Predator-prey and exponential growth)
- Question 6-3 (Graphing exponential growth)
- Question 6-4 (Exponential growth and human population)
- Question 6-5 (Predator-prey, boom and bust, and the price of oil)
- Question 6-6 (Boom and bust cycles in commodities)

#### Background and questions from Chapter 7

Subsidence, flooding, and failure of the MRGO levee during Hurricane Katrina.

- Question 7-1 (Exponential subsidence)
- Question 7-2 (Subsidence and flooding from Glacial Isostatic Adjustment)
- Question 7-3 (The importance of considering multiple factors)

#### Background and questions from Chapter 8

Infrared absorption and radiative balance; Plank's Law

- Question 8-1 (Wien's Law)
- Question 8-2 (Solar irradiance at the top of Earth's atmosphere)
- Question 8-3 (Solar irradiance at Earth's surface)
- Question 8-4 (Earth's average temperature, without greenhouse)
- Question 8-5 (Earth's average temperature, with greenhouse)
- Question 8-6 (Earth's average temperature, with extra CO<sub>2</sub>)
- The role of feedbacks
- The importance of heat content
- Question 8-7 (Heat content of the uppermost solid Earth)
- Impacts on human health
- Question 8-8 (Chronic kidney disease, multiple factors)
- The long-long term
- Question 8-9 (Correlation of temperature and CO<sub>2</sub>)
- Question 8-10 (Role of feedbacks)
